augmented reality ecosystem

The way Arcona raffles off the Digital Land during the WhiteList Sale

Arcona will reward 6 lucky buyers of arcona tokens with a plot Digital Land in the most wanted locations of the world. During the WhiteList sale we offer one new lot to draw every 4 hours. After the ICO start we will continue the raffle but it will be happening 4 times a day.

Every winner will be determined by random selection of all the users who bought tokens during the drawing period. A chance to win a plot grows proportionally to the user's purchase share in the total amount of tokens sold during the lot drawing.

To make it clearer let's consider the following example: 3 token buyers bought 20, 30 and 50 tokens during same drawing period. The total purchase sum is 100, correspondingly the first chance to win is $20/100 * 100\% = 20\%$, etc.

The very determination of the winner will be made within 30 minutes after the end of the period of drawing. That's the time needed to conduct and record the results of the transaction in the network broadcast.

For example for the drawing period from 00-00 to 04-00 a.m., the winner will be determined within 30 minutes after the end of this period, which means - to 04-30 a.m. A plot of land won will be assigned to its user. All the information about the plots currently being raffled will be placed in the profile and at the landing page, the information about the plots won - in the user profile.
